

Understanding Mitel Multi-Site Networks

Workshop

Format: Workshop Recording **Audience:** Technicians and Sales Engineers **Duration:** 1 hr

Overview

"Understanding Mitel Multi-Site Networks" includes T1s, PRI, MSDN, IP Trunking, SDS, and Clustering. The target audience for this workshop includes installation and maintenance technicians, sales and sales engineering personnel, managers and all others interested in learning more about "how and what" information is exchanged between MCD devices in a Multi-Site Mitel network.

Prerequisites

None.

Topics

This workshop introduces various levels of Mitel networking. The session examines each of several trunking methods (analog/digital/PRI/IP) and describes capabilities and functions of each when used between Mitel PBXs. The thrust of the workshop, however, is really to describe and explain specifically what features and functionality are gained via SDS and Clustering.

Additional Recommended Training

None.
