

Beneath the Application: Network Dependencies for VoIP Networks Workshop

Format: Workshop Recording

Audience: Technicians, Installers,
and Sales Personnel

Duration: 1 hr

Overview

The “Beneath the Application” Workshop introduces and discusses principal elements of the physical networks over which Mitel voice applications operate.

Prerequisites

None

Topics

The session describes the roles of switches, routers, firewalls, and gateways – explaining the purpose of each in a converged voice/data network.

The rewards and challenges of today’s converged solutions are discussed and several Mitel-specific example configurations and topologies are detailed. It includes discussion and presentation involving:

- 802.1Q
- L2P
- IPQoS
- RTP
- G.7XX on packet
- Layer 3 Switching
- MPLS

Additional Recommended Training

None
