Introduction to Wireshark

Workshop

Format:	Workshop Recording	**Audience:**	Technicians, System Administrators, System Planners and Designers, Tech Support	**Duration:**	1 hr

Overview

This seminar shows attendees how to see every bit of network information flowing over their ethernet cables with a packet-sniffing program called "Wireshark". Packet sniffing is absolutely the best way to discover what really happens on your network, and Wireshark is one of the best-known sniffers as well as being a free and open-source program that anyone can use anywhere.

Audience: Installation & Maintenance Technicians, System Administrators, System Planners and Designers, Tech Support personnel, CCNA & Advanced LAN/WAN students, Anyone curious about what networks do when they think nobody is watching.

Prerequisites

None.

Topics

We cover:
- Finding Wireshark on the web and installing it
- Starting a capture session and making sense of the data
- Basic filtering and useful settings

At the end of this seminar the attendees should have a good idea of how to get started using Wireshark for fun, for learning, and for troubleshooting.

Additional Recommended Training

None
